## **A real commitment to a sustainable future**

**Dollard-des-Ormeaux, November 18, 2024** – The City of Dollard-des-Ormeaux reaffirms its commitment to sustainable development by unveiling a new video highlighting its initiatives to reduce its ecological footprint and improve the quality of life of its residents. This project is in line with the City's environmental vision, which places ecological transition at the heart of its actions.

Over the years, Dollard-des-Ormeaux has undertaken several ambitious projects to meet today's environmental challenges, including:

- **Modernization of municipal infrastructures** with energy-efficient technologies that reduce energy consumption.
- **Transition to a fleet of electric and hybrid vehicles**, minimizing greenhouse gas emissions.
- **Creation and maintenance of ecological corridors** and green spaces, promoting biodiversity and access to natural, nourishing spaces for all.
- **Residual materials management program**, encouraging sorting, waste reduction and recycling.

These initiatives aim to strengthen the City's resilience to climate change, while improving residents' quality of life in both the short and long term.

“We're proud of all the actions we've taken to make our community more sustainable. Every action counts, and we will continue to work tirelessly to ensure a healthy environment and a better quality of life for all our residents, now and in the future. This is just the beginning of our efforts towards a greener future,” said Alex Bottausci, Mayor of Dollard-des-Ormeaux.

The video, available today, offers a glimpse of the projects completed and to come to make Dollard-des-Ormeaux a model for sustainability, actively contributing to the fight against climate change.
